12 This Application claims the benefit of the priority of Provisional Applications Serial # 13 60/039,041 filed February 24, 1997 and Serial # 60/064,421, filed October 30, 1997 and 14 Application Serial # 09/023,968, filed February 13, 1998, now U.S. Pat. #6,047,274, issued April 15 4, 2000, and is a Continuation of co-pending Application Ser. #09/542,451, filed April 4, 2000. 16 \*\*\*\*\*\*\* 17 18 Please add the following new Claims 155 – 158. 19 20 A method for creating an automated bidding process among energy Providers and end 21 155. users in which a moderating computer collects economic incentive data from each 22 Provider of a plurality of energy Providers, processes the economic incentive data and 23 selects at least two Providers of the plurality of energy Providers to provide energy to at 24 least one end user, based on an economic choice, wherein the method comprises: 25 a. receiving in the moderating computer, economic incentive data specifying the 26 economic incentive each Provider will place on a unit of energy provided to the at 27 least one end user, processing the economic incentive data to produce processed 28 economic incentive data, and storing the economic incentive data and the processed 29 economic incentive data in a data base of the moderating computer as first end-user 30 set data; 31 b. in the moderating computer, transmitting at least a portion of the first end-user set 32 data to at least a portion of the plurality of energy Providers; and 33

least two Providers of the plurality of energy Providers to provide energy to the at least one end user, with each of the at least two Providers to supply a portion of the energy to be used by the at least one end user at at least one end-user facility during at least a portion of a specific future time interval.

156.

A method for creating an automated bidding process among energy Providers and end users in which a moderating computer collects economic incentive data from each Provider of a plurality of energy Providers, processes the economic incentive data and distributes processed data to a first control computer associated with at least one end user, thereby enabling the first control computer to select at least two Providers of the plurality of energy Providers to provide energy to the at least one end user, based on an economic choice, wherein the method comprises:

a. receiving in the moderating computer, economic incentive data specifying the economic incentive each Provider will place on a unit of energy provided to the at least one end user, processing the economic incentive data to produce processed economic incentive data, and storing the economic incentive data and the processed economic incentive data in a data base of the moderating computer as first control computer data;

b. in the moderating computer, transmitting at least a portion of the first control computer data to the first control computer associated with the at least one end user;

c. in the moderating computer, transmitting at least a portion of the first control computer data to at least a portion of the plurality of energy Providers; and

d. in the first control computer, receiving the first control computer data, processing the first control computer data and selecting at least two Providers of the plurality of energy Providers to provide energy to the at least one end user, with each of the at least two Providers to supply a portion of the energy to be used by the at least one end user at at least one end-user facility during at least a portion of a specific future time interval.
